

CDISC SHARE: A BRIDG-based Metadata Repository Environment

Wayne R. Kubick
CDISC

Strength through Collaboration

The CDISC Standards Guide

BRIDG – Part of the SHARE Foundation

- **BRIDG Purpose:**

A collaborative effort to produce a shared view of the dynamic and static semantics that collectively define a shared domain-of-interest.

- The semantic foundation for HL7/CDISC-based application and message development

- **Domain-of-interest/scope:** Protocol-driven research

- A Unified Modeling Language (UML) Model of the data (using ISO 21090 datatypes), organization, resources, rules, and processes involved in the formal assessment of the utility, impact, or other pharmacological, physiological, or psychological effects of a drug, procedure, process, or device on a human, animal, or other biologic subject or substance plus all associated regulatory artifacts required for or derived from this effort.

- **Stakeholders:**    

- **Governance Process:**

Board of Directors prioritizes projects and committee consults with projects and harmonizes project models into main model with help of project analysts/SMEs

Biomedical Research
Integrated Domain Group

Domain-Friendly, Subdomain-Specific Business Models

Adverse Event

CDISC SHARE VISION

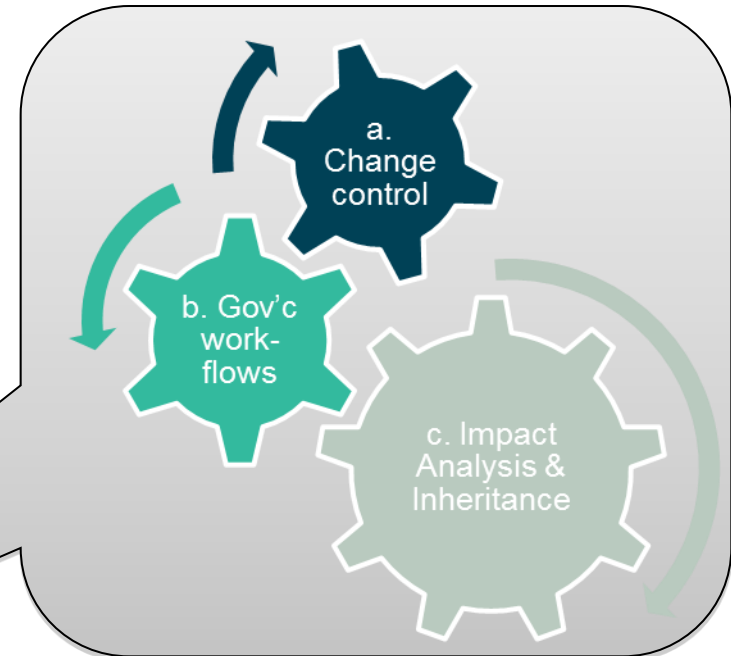

A global, accessible electronic metadata library, which through advanced technology, enables precise and standardized data element definitions **and richer metadata** that can be used in applications and studies to improve biomedical research and its link with healthcare.

<http://www.cdisc.org/cdisc-share>

- Single, trusted, authoritative source for CDISC data standards
- Concepts, metadata, collections, relationships, value sets across the full spectrum of CDISC content
- Links research to healthcare concepts to support interoperability
- Aligned with NCI Semantic Systems

BRIDG, ISO21090

Protocol, CDASH

SDTM, ADaM

Terminologies

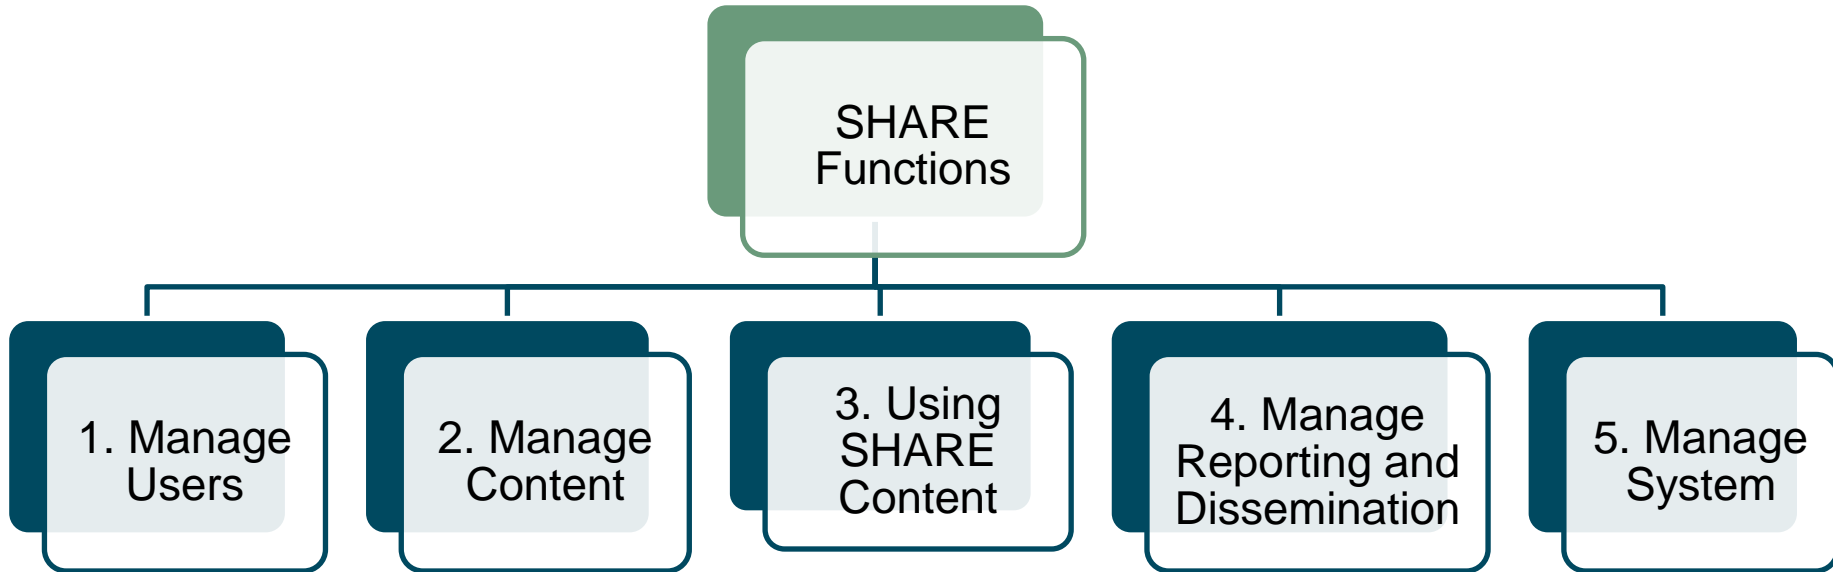

Facilitates Data Exchange

- Access to data standards
- Source to target mapping & traceability
- Transformation logic

Graphics adapted from Source by Sue Dubman, Sanofi-Aventis

SHARE Top-Level Functions

- Manage User Roles
- Manage User Profiles
- Manage Password
- Manage User Dashboard

- Manage Work Items
- Manage Standard Objects
- Manage Audit Trail

- Search and Browse
- Import
- Export
- Print

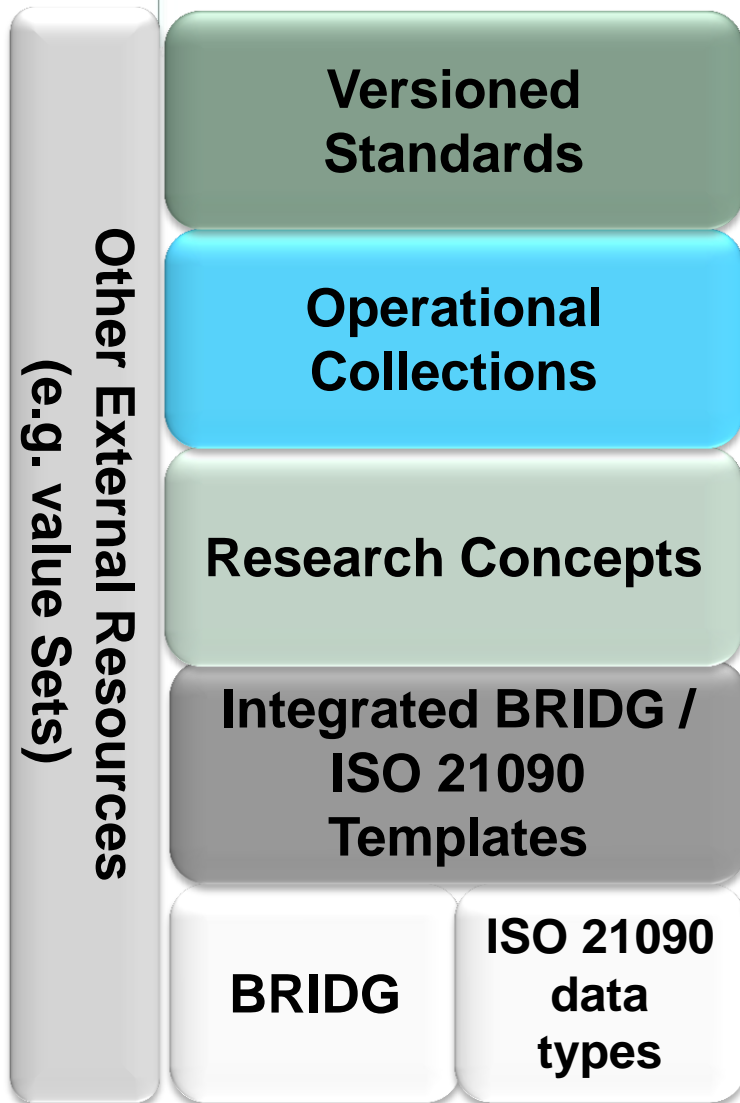

- Send Notifications to users re object changes
- Manage listserv

- Manage SHARE MDR Framework Components
- Monitor User Activity
- Maintain Metrics
- Manage System Availability

CDISC SHARE Library Contents

- Metadata (including BRIDG, SDTM and CDASH)
 - Trial Design Metadata
 - Definitions
 - Datatypes (ISO 21090)
- Links to controlled terminology (CT) dictionaries via the NCI (which links to CDISC CT, SNOMED, ICD9, ICD10, UMLS, etc.)
- Implementation instructions
- Links to analysis concepts.

SHARE MDR Framework

A Versioned Standard is comprised of a set of Operational Collections and associated variables and rules for a specific use case (e.g., SDTM, CDASH)

An Operational Collection is a grouping of Research Concepts. There may be additional rules between objects within the Operational Collection. An Operational Collection may be analogous with a SDTM Domain, a CRF, an ADaM data set, or a similar level of operational structure.

Basic elements that are the foundation for the content described in the SHARE repository. A Research Concept defines one or more related pieces of clinical data, which is developed using an Integrated BRIDG / ISO 21090 Template.

Integrated BRIDG / ISO 21090 Templates use BRIDG classes and relationships to fashion small re-usable patterns that are commonly needed in clinical research

BRIDG is the foundation model for SHARE that provides classes, attributes and associations use to creates core building blocks.

SHARE - Describes the Links between the Metadata

Relationship

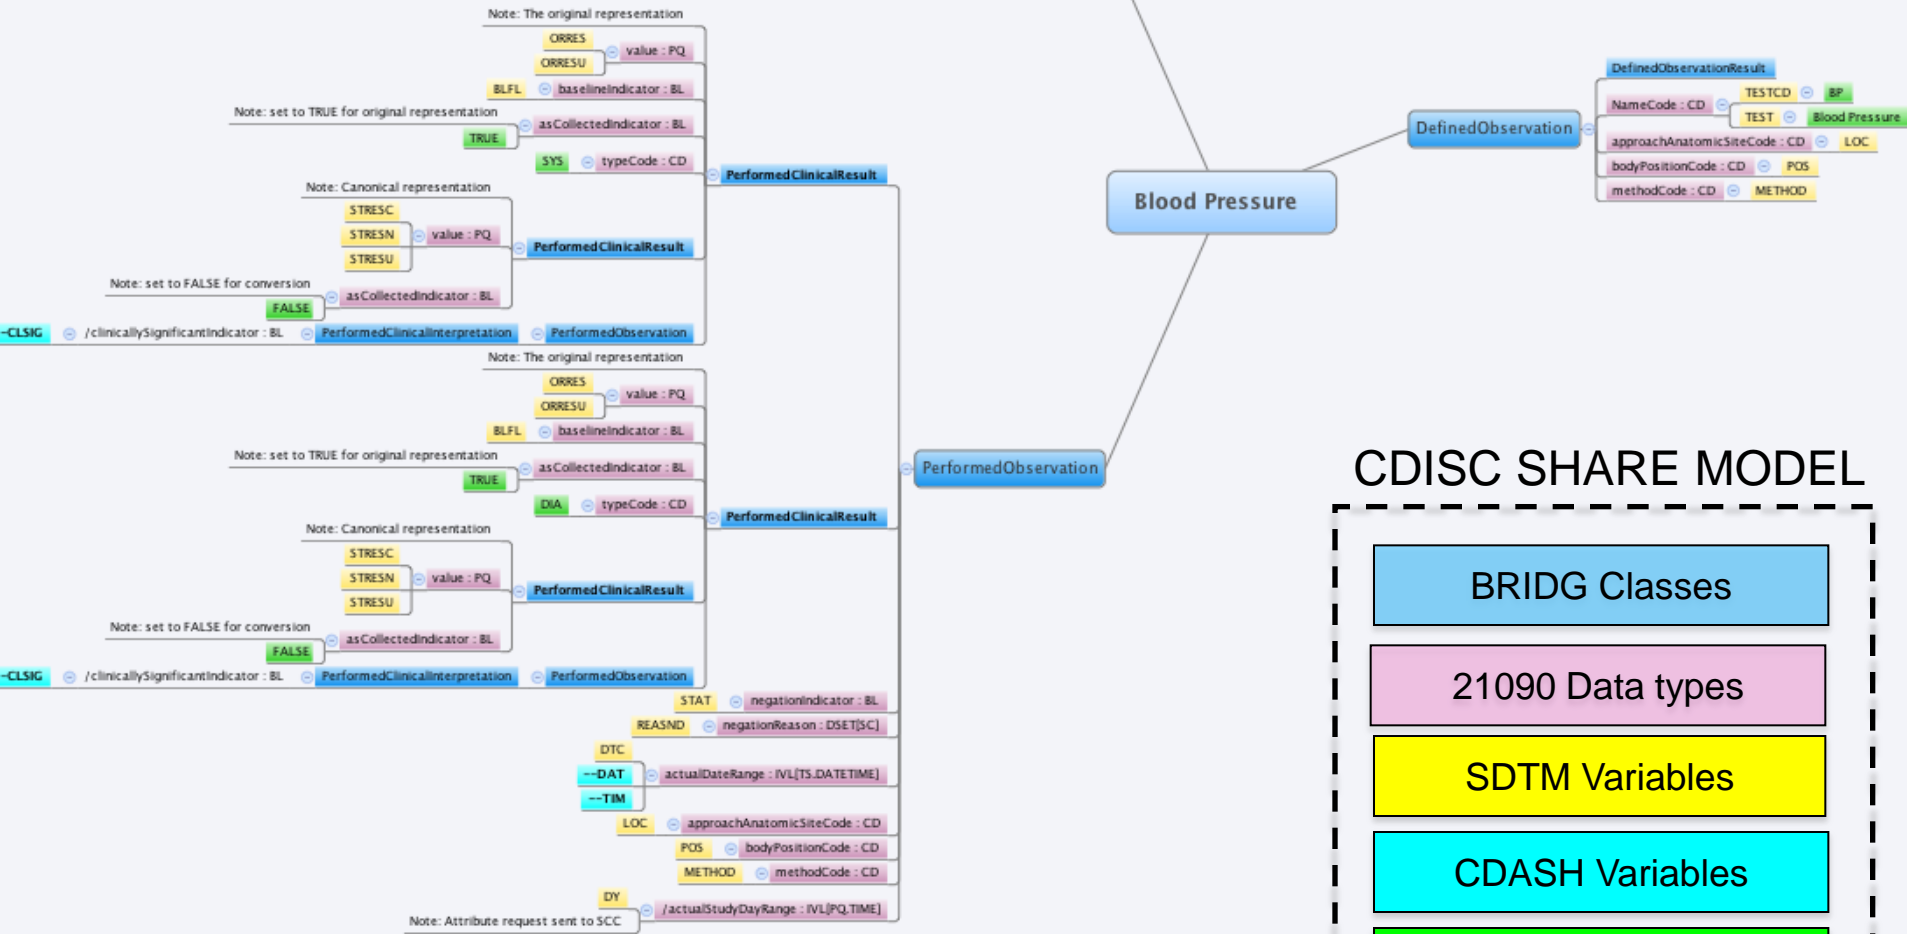

Relationship

Relationship

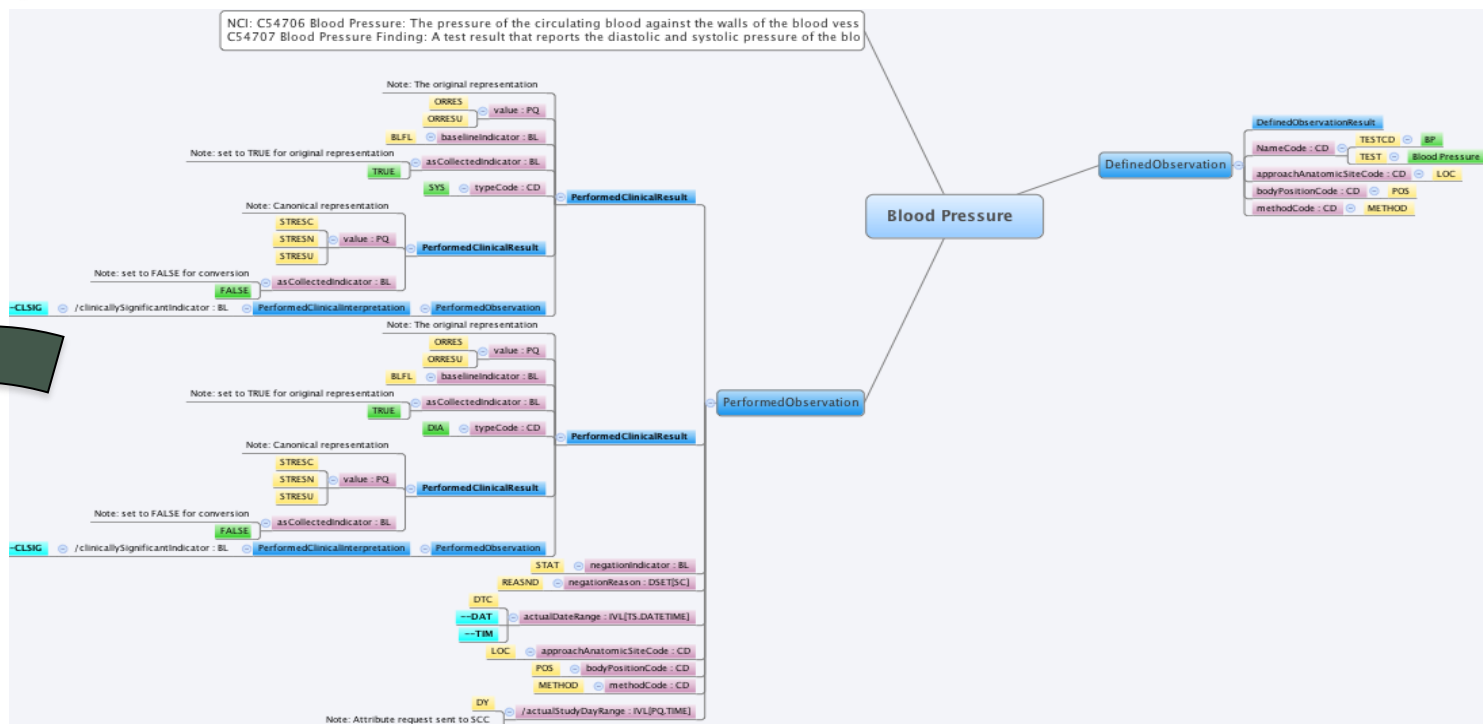

USUBJID	VSSEQ	VSTESTCD	VSTEST	VSPOS	VSLOC	VSORRES	VSORRESU
ABC-001-001	12	SYSBP	Systolic Blood Pressure	SITTING	LEFT ARM	95	mmHg
ABC-001-001	13	DIABP	Diastolic Blood Pressure	SITTING	LEFT ARM	44	mmHg

The CDISC SHARE MODEL

NCI: C54706 Blood Pressure: The pressure of the circulating blood against the walls of the blood vess
 C54707 Blood Pressure Finding: A test result that reports the diastolic and systolic pressure of the blo

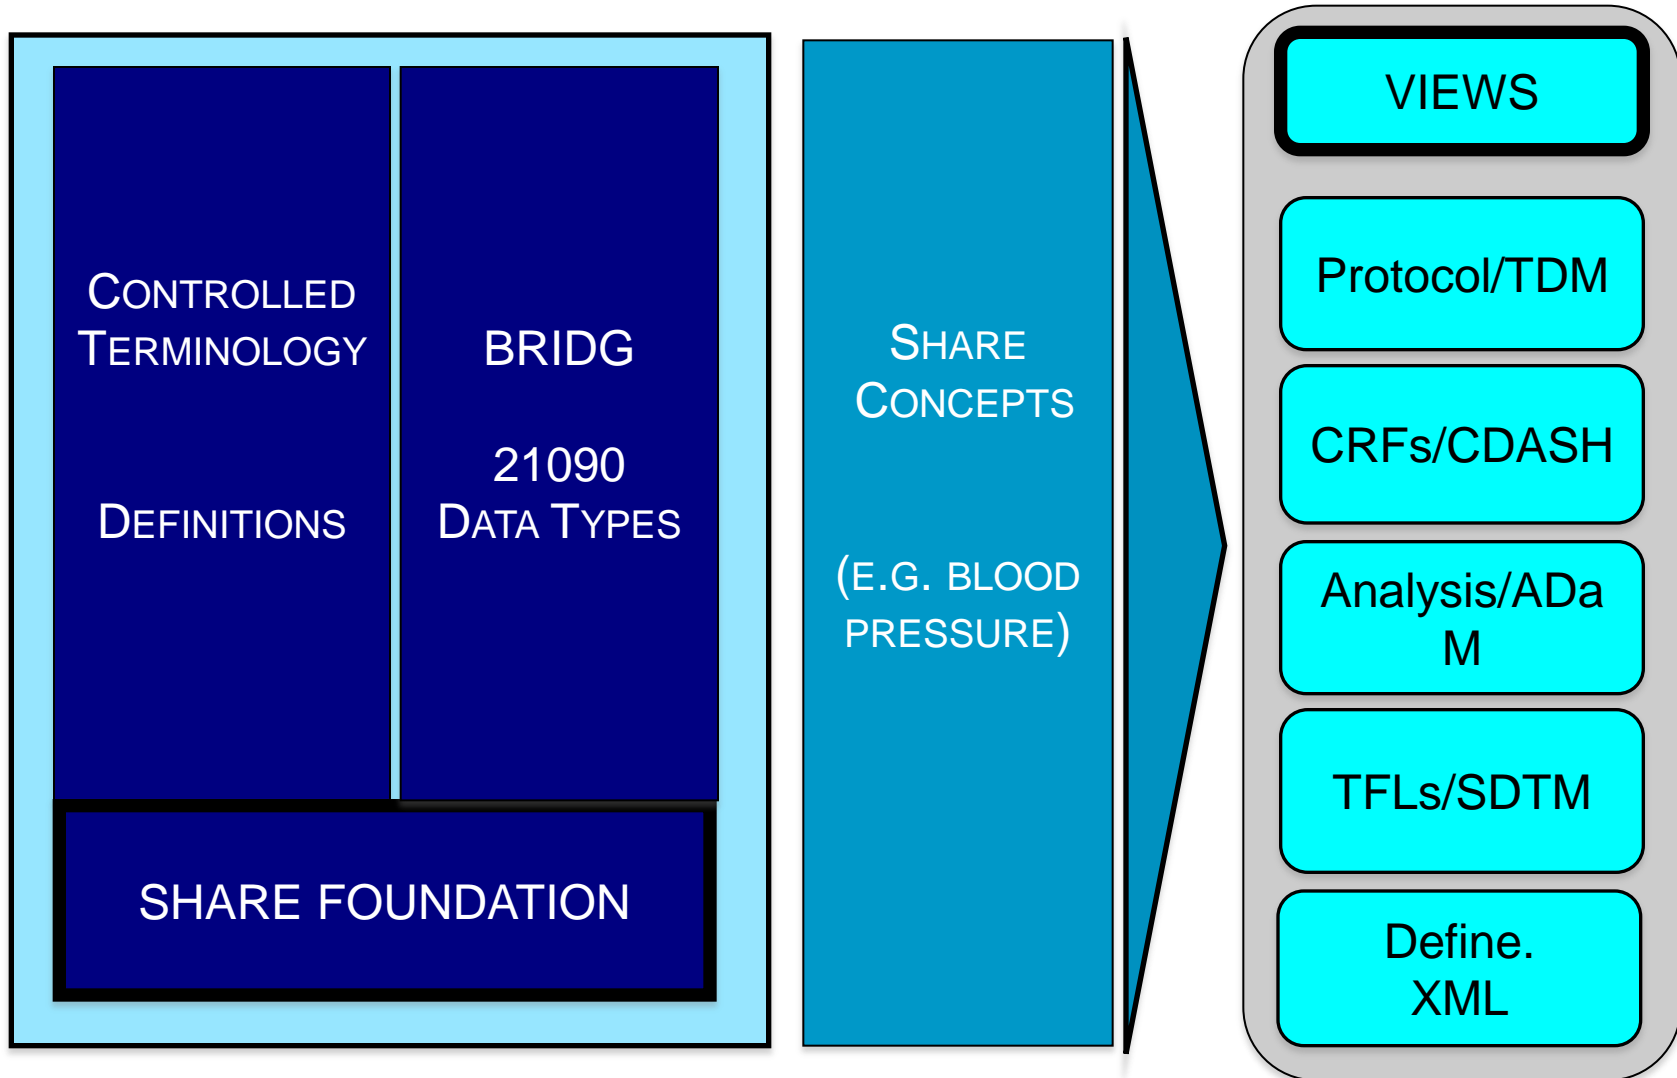

Content Mapping

1	Concept	Blood Pressure							
2	Definition	NCI: C54706 Blood Pressure: The pressure of the circulating blood against the walls of the blood vessels.							
3	Glossary	No term in CDISC glossary.							
4	Mindmap Name	Blood Pressure							
5	Formula	Not Applicable							
6	Variable Name	Variable Label	Used	Codelist Master	Set of Valid Values	Assigned Value	ISO 21090 Datatype Constraint	ISO 21090 Datatype Constraint Attribute	
7	DOMAIN	Domain	Y	C66734	C49622	C49622			
8	--TESTCD	Test Short Name	Y	C66741	C25299, C25298	C25299, C25298			
9	--TEST	Test Name	Y	C67153	C25299, C25298	C25299, C25298			
10	--DTC	Date/Time of Assessment	Y						
11	--PERF	Assessments Collected	Y						
12	--STAT	Completion Status	Y

SHARE Concept-Based View

SHARE Status Update

- RFI issued in August – 24 responses; 10 short-listed
 - Software vendors, academics, system integrators
- Draft RFP due to be released in December - targeting a decision by Q1 2013
- Updated business requirements will soon be posted on CDISC website
- Currently exploring additional partnership and funding options.
- Goal is to have a release 1 prototype environment in initial use by end of 2013.

Strength *through collaboration.*
